Andy is doing a science project about earthquakes. Here is part of his report.

Earthquakes <u>often</u> scare people. People think the earth will crack open <u>everywhere</u>. But earthquakes build up <u>slowly</u>.

In the first sentence, the word *often* describes the action of the verb *scare*. It tells *when* the earthquakes scare. *Everywhere* is an adverb that tells *where* the earth could crack open. *Slowly* is an adverb that tells *how* the earthquakes build up.

Definition · Usage

An **adverb** is a word that describes a verb, an adjective, or another adverb. Most adverbs tell *when*, *where*, or *how*. Adverbs often end in *ly*. Other common adverbs are *very* and *always*.

## Your Turn

Underline the adverb in each sentence. Write *when, where*, or *how* on the line to identify what the adverb tells.

- Plates under the earth's crust are constantly moving.
- 2. People never feel most of the earth's movement.
- 3. Scientists carefully study the movement of the plates.
- **4.** Earthquakes usually occur along the edges of the plates. \_\_\_\_\_
- **5.** When the plates move, stress builds in the rocks below.
- **6.** When the edges collide, the ground may split noisily.
- **7.** Tremors from the earthquake spread fast.
- 8. Shock waves can travel anywhere.
- 9. Aftershocks often cause as much damage as the quake.
- 10. Scientists work tirelessly to predict earthquakes.
- 11. But they don't always know if an earthquake will strike.
- 12. The earth may rest quietly before the next earthquake.
